

2.6.1 The main aim of courses is to produce the best teacher to the society. Our faculty members give their best to produce the same. To develop practical knowledge we send student - teachers to different practice- in- teaching schools. The student teacher experiences mastery over the subject, teaching skills and techniques, flexible and open to change and various competencies.

So the Student -teachers acquires a comprehensive theoretical knowledge and practical training during the course. This Programme provides an integrated Knowledge and practice through class room teaching. The course builds understanding of the concept, theories, ideas and practices in education. It develops reflective and analytical skills and understanding of critical issues in education.

Students acquire knowledge, understanding , skills and application in different areas with the help of B.Ed. course. The course content has been categorized as

Perspective course,

Enhancing professional competencies,

Engaging with field and Pedagogical method. With these Students develop various competencies. The assessment of student- teachers learning outcomes are evaluated by internal and external examinations and the result obtained by the student teacher. During the academic year our institution done with hundred percent of pass percentage.
